

I am a truck driver and XM radio helps me a great deal while I am on the road. I can stay informed about the news going on in the country and the world. Also I can check the weather in major cities that I am about to be traveling through. I urge you to reject NAB's petition 04-160. The only way that we can check the weather and traffic while on the road is to look up a decent local station on the radio that hopefully would say something about the weather or traffic in the area, most of the time it is unlikely. At this time I am in Tulsa, OK can the NAB give me a local station that tells me the conditions in Dallas right now? I didn't think so. All I have to do is flip the dial on the XM and find out what I am going to be running into tonight. I really don't see what all of the fuss is about anyway, we pay for this service. If it is taken away we will just have to get our info on the internet. Thank you for your time.
